Your Code Powers the World.  
Our Training Powers You.

## Outline

What problem is solved?

How does DAPR work?

Open telemetry

## What is Dapr?

---

“APIs for building portable and reliable  
microservices  
Leverage industry best practices and  
focus on your application’s logic.”

<https://dapr.io/>

## Why Would You Want to Use Dapr?

Simplify your codebase

Interchangeability

Testability

Solve standard microservices complexity

Build vendor agnostic solution

## Who is Behind Dapr?

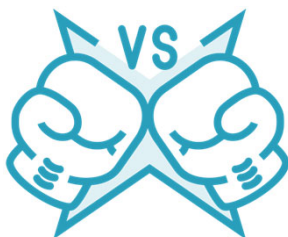

---

# Who is Behind Dapr?

Community Driven  
&  
Open Source

Vendor & Language  
neutral

 **CLOUD NATIVE**  
COMPUTING FOUNDATION

# Common Problems when Building Microservices

---

# Common Problems when Building Microservices

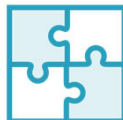

Insecure communication

Runtime errors hard to find

Service discovery

Overall system health and performance insights

Transient errors

Decoupling through messaging (pub/sub)

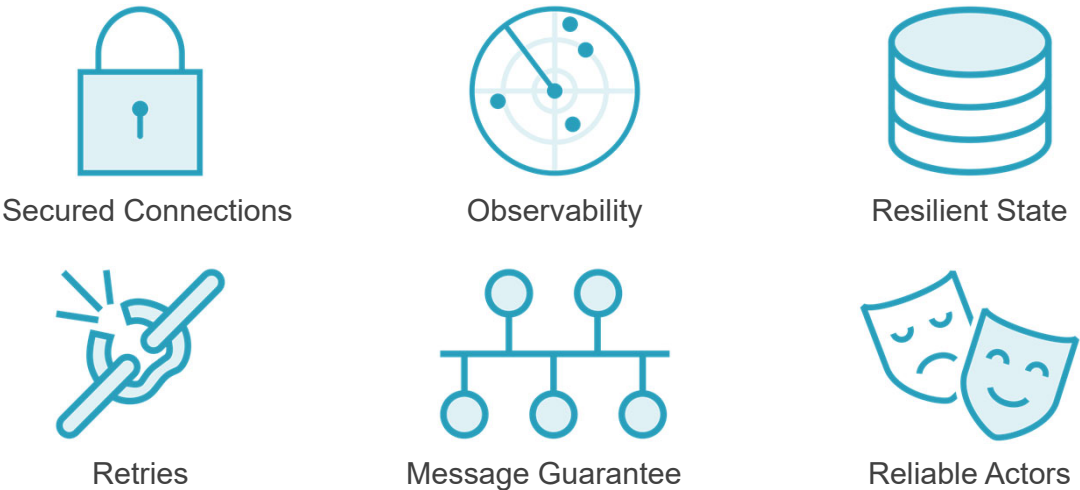

# Common Industry Solutions

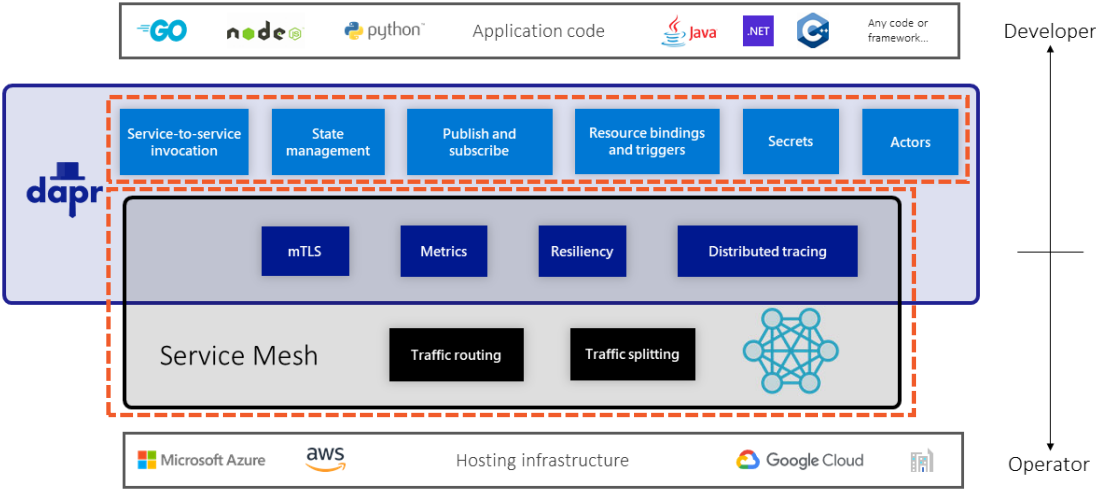

---

# Industry Established Best Practices for Reliability

# Industry Established Best Practices

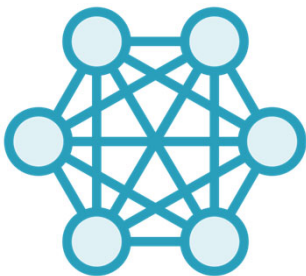

# Dapr, a service mesh, or both?

Use one or more  
building blocks  
+  
Language & platform  
agnostic

Corporate policy  
+  
Building blocks

Capabilities not  
provided by Dapr

## Solving Common Microservices Challenges

## Solving Common Microservices Challenges

Sidecar architecture based on APIs

Building blocks provide interchangeability

Language and vendor agnostic implementation

Built and supported by the community and CNCF

## Core Dapr Concepts

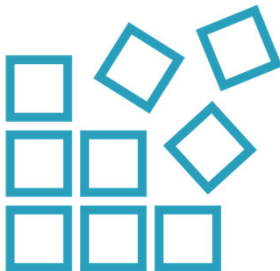

---

# Core Dapr Concepts

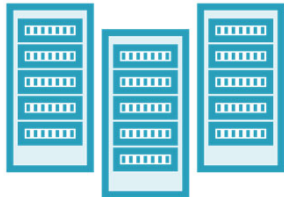

Application  
==  
Microservice

Building Block  
+  
Configuration

Middleware

Hosting

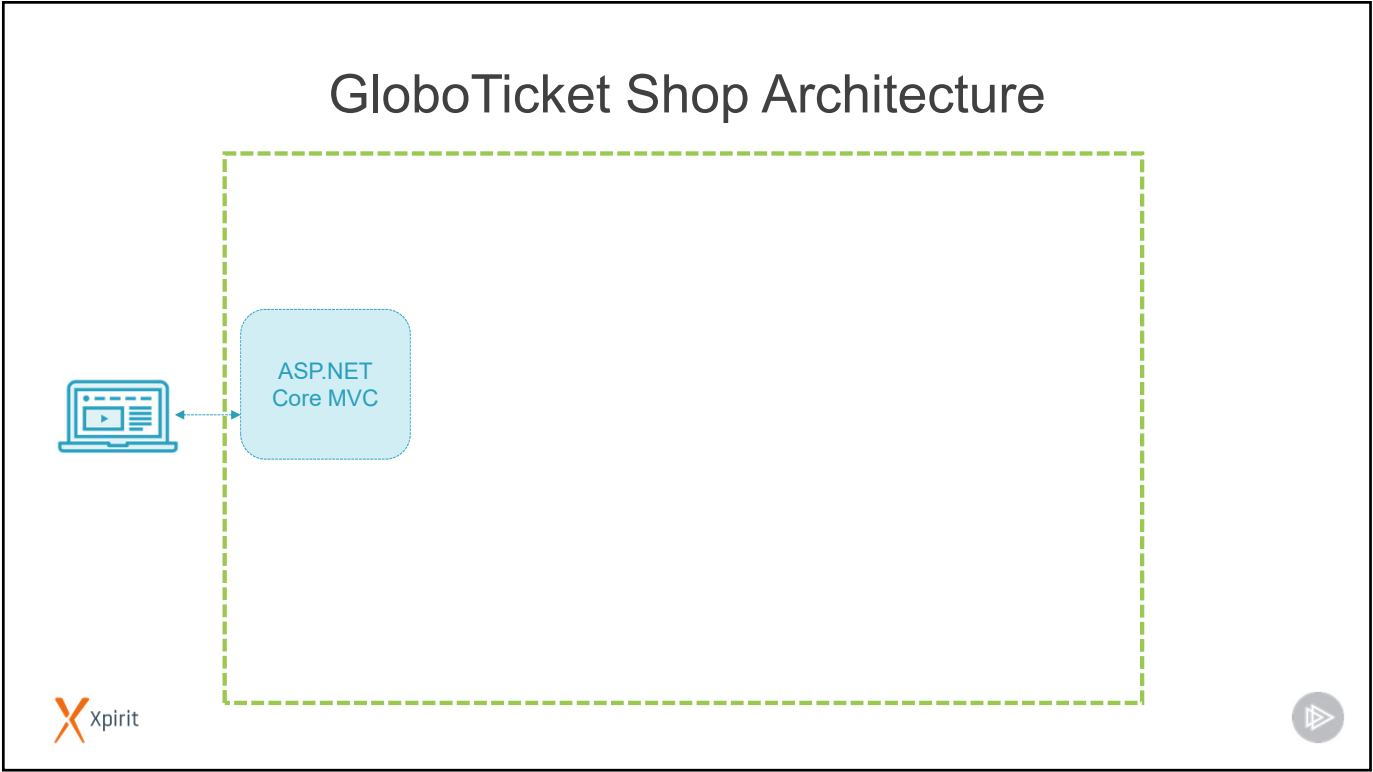

# Results of Applying One Building Block

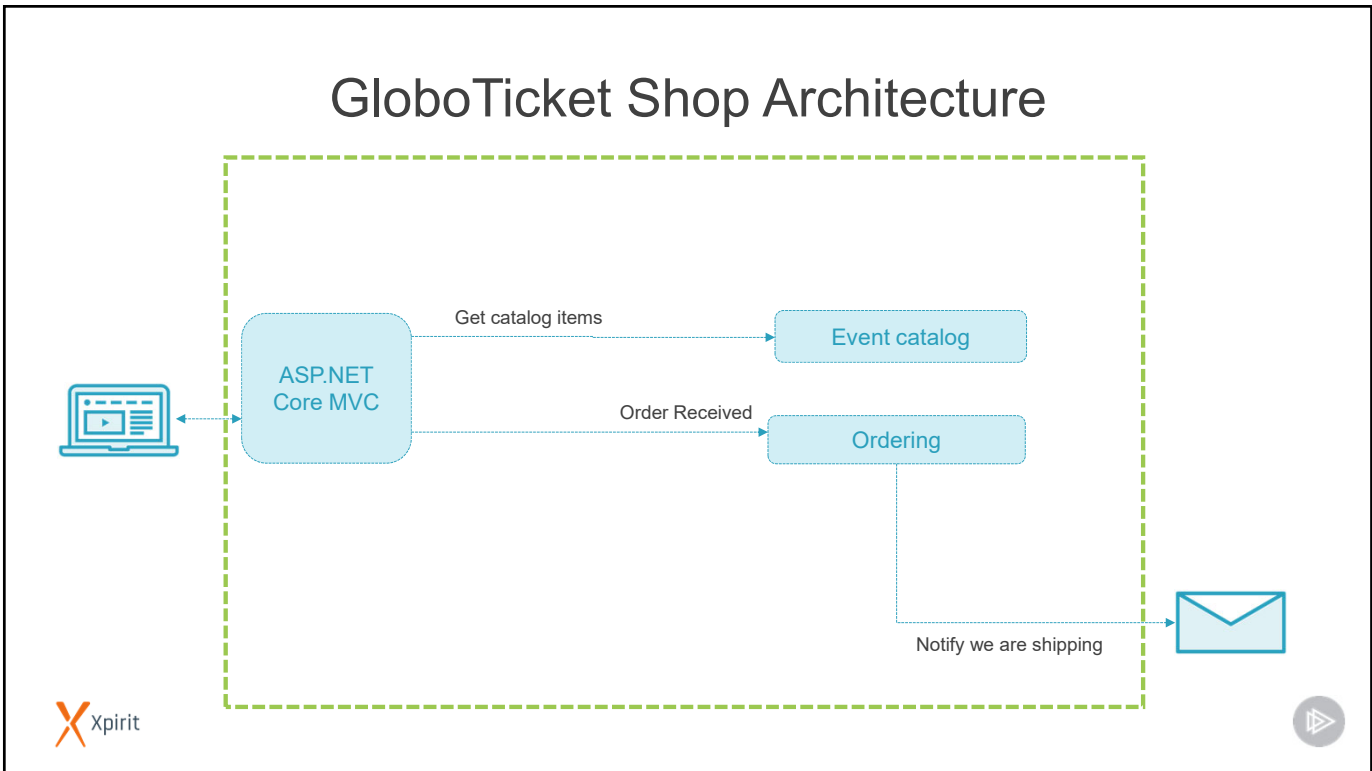

Demo

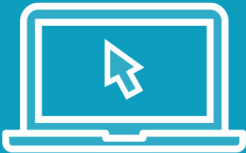

Start application Globo Ticket

Demo

Start application Globo Ticket

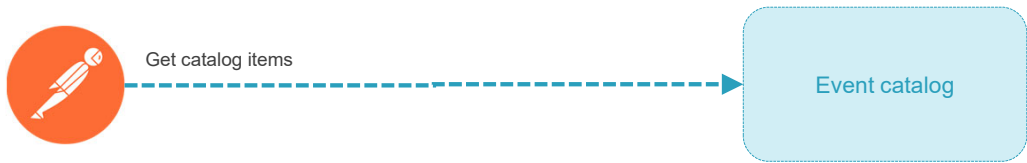

Demo

Add Dapr service invocation building block

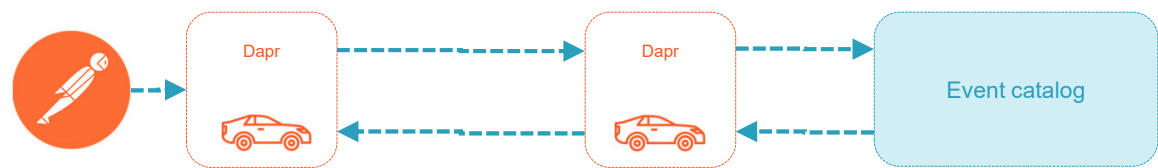

# GloboTicket Event Catalog

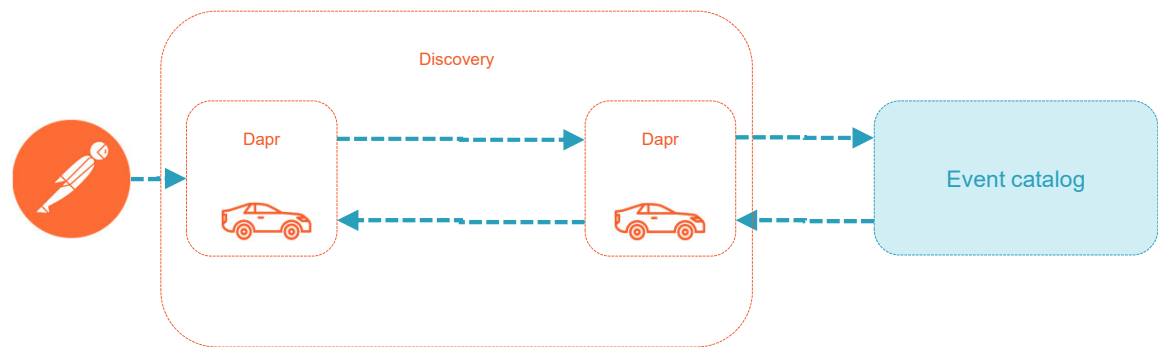

# GloboTicket Event Catalog

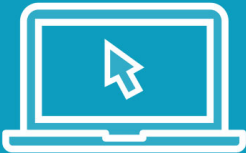

# GloboTicket Event Catalog

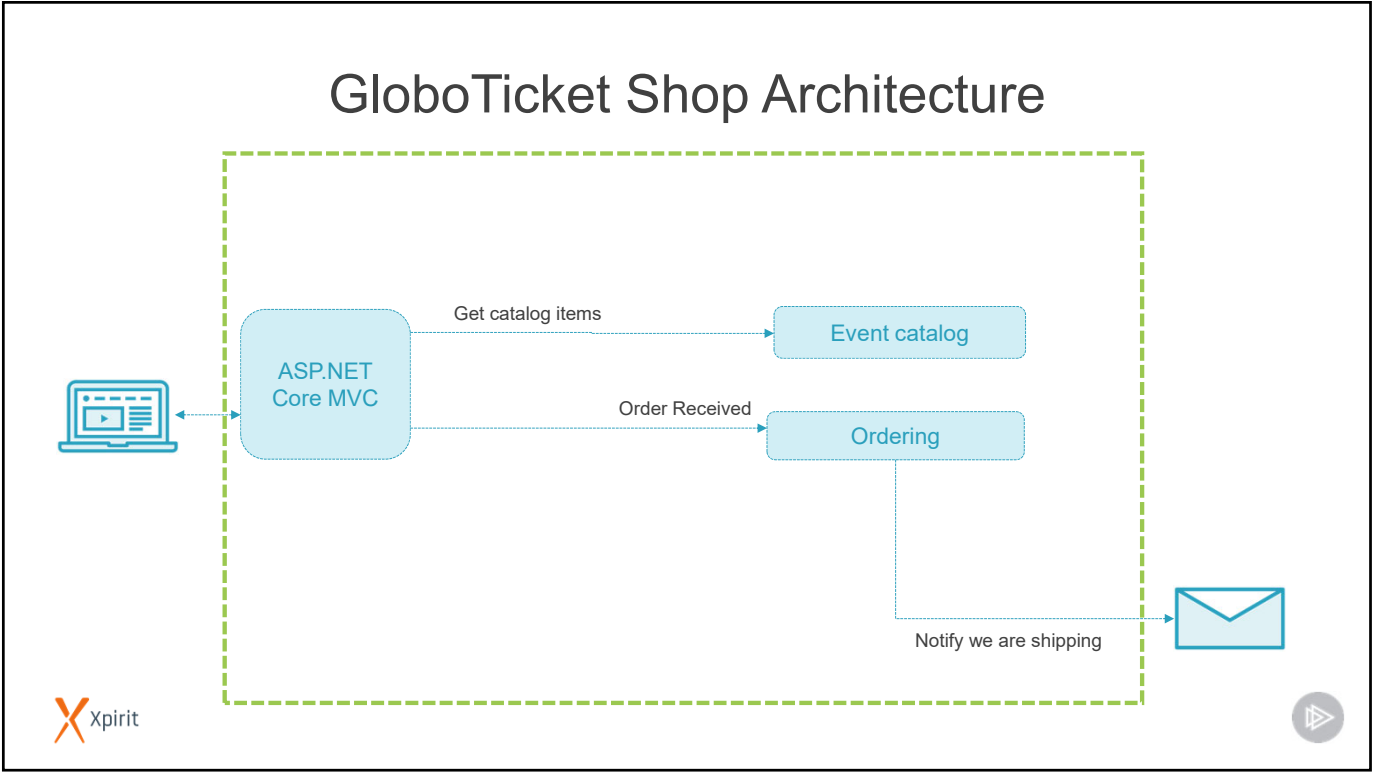

# GloboTicket Event Catalog

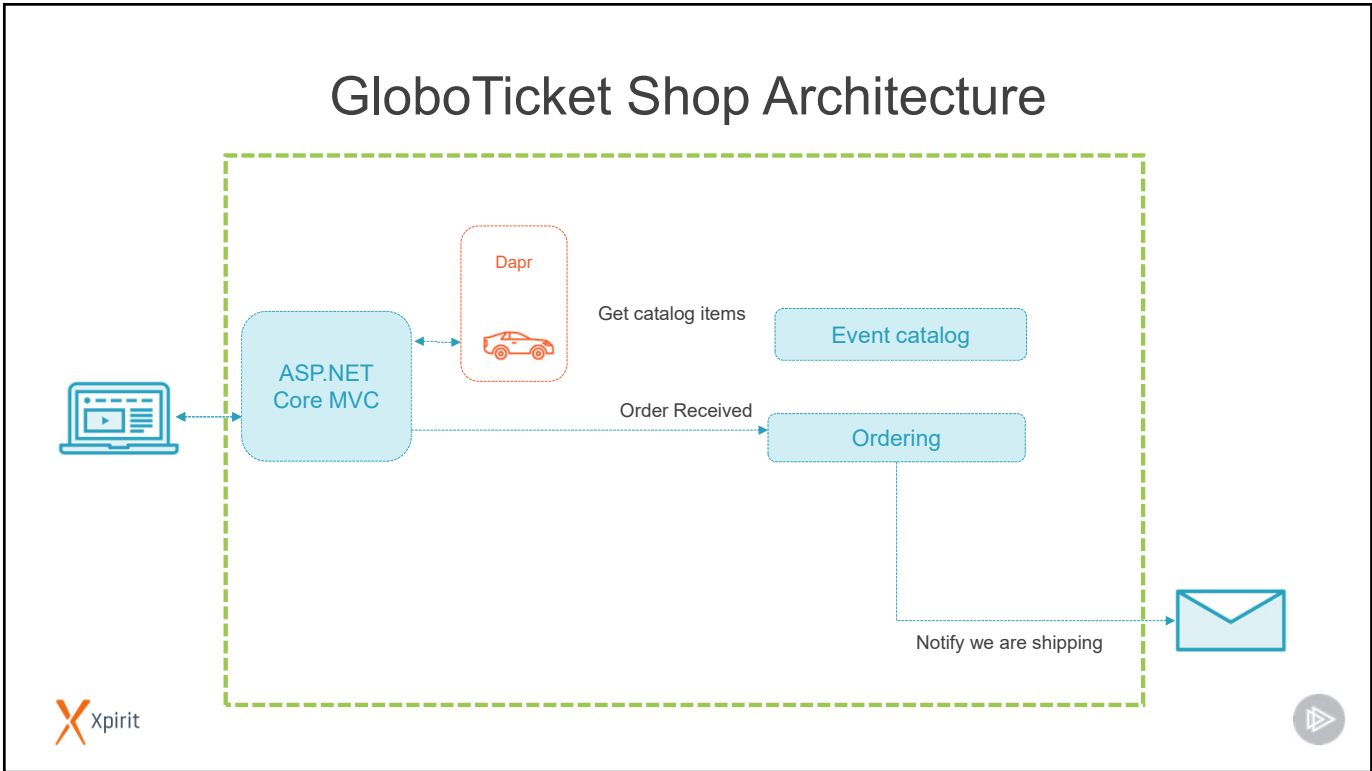

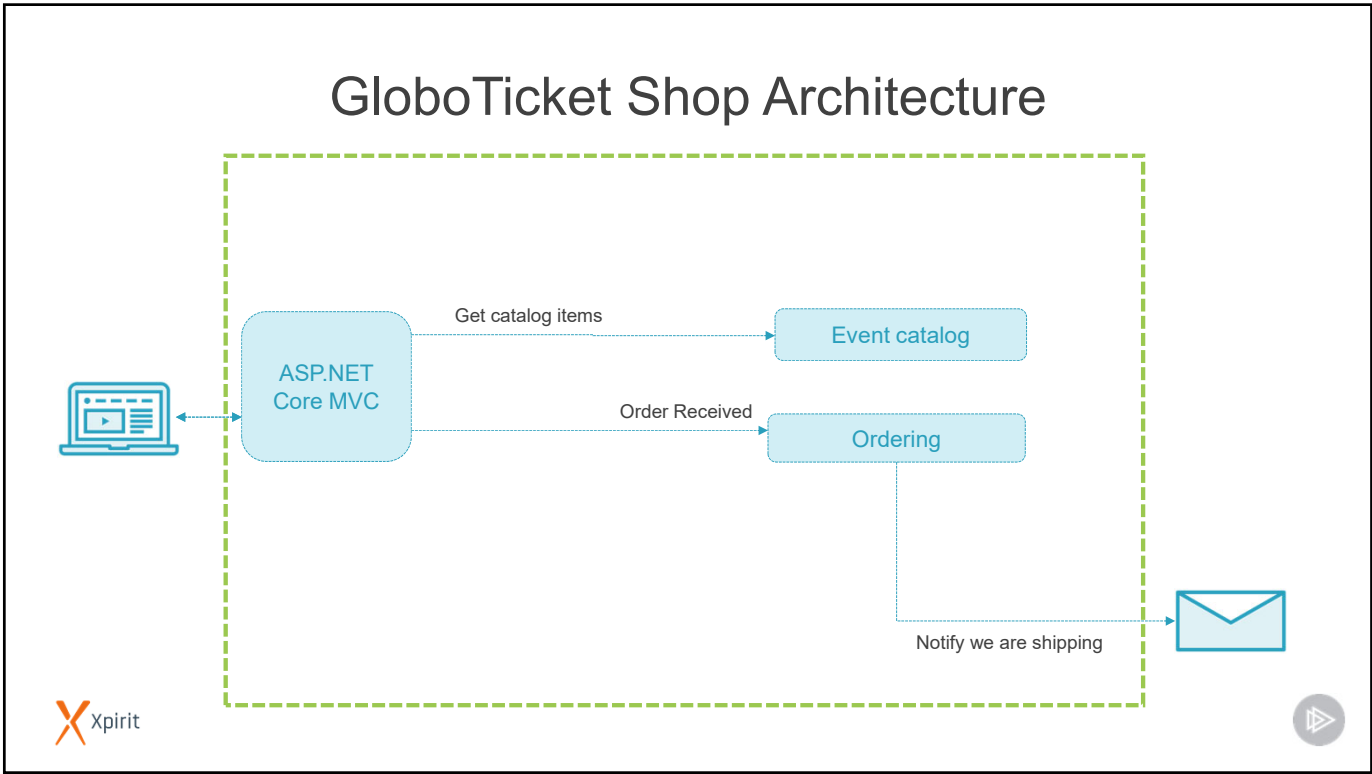

# Demo

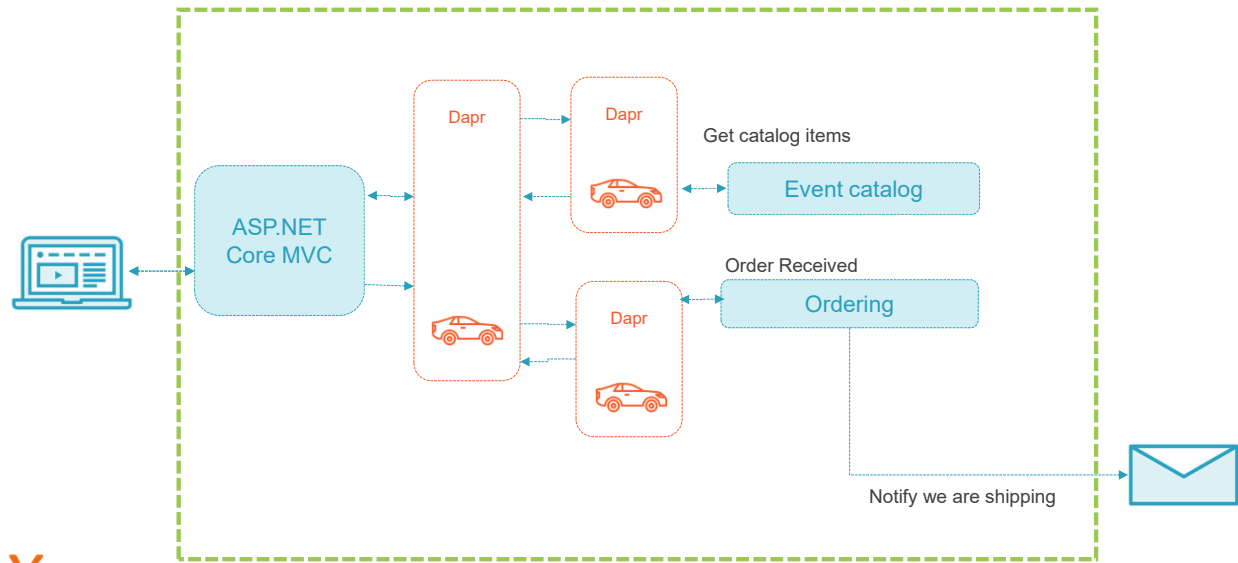

## Add Dapr service invocation building block to Globo Ticket

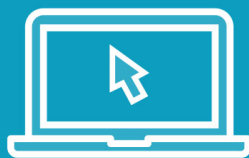

# GloboTicket Shop Architecture

## Demo

Add Dapr service invocation building block

# How Does Dapr Work?

# The Dapr Architecture

---

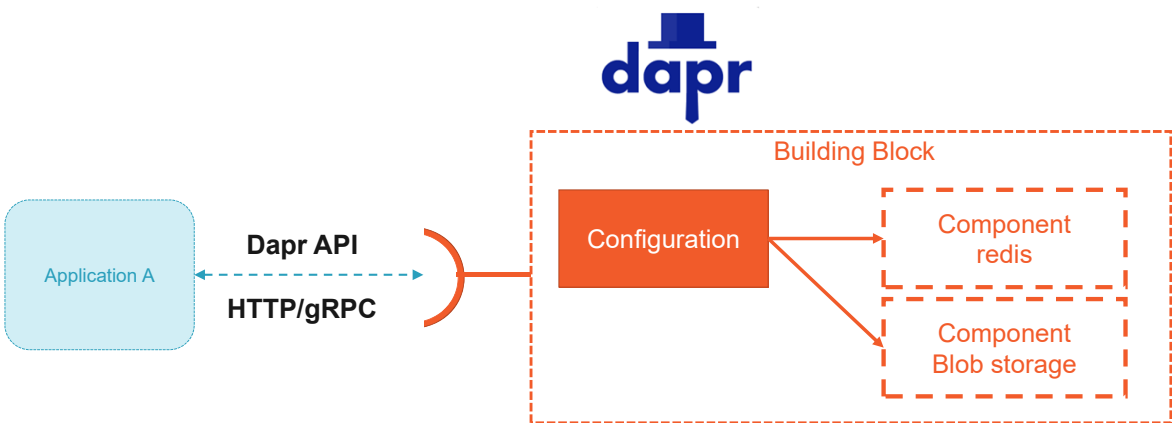

# Dapr Architecture

```
POST http://localhost:3500/v1.0/invoke/cart/method/neworder
GET http://localhost:3500/v1.0/state/inventory/item123
POST http://localhost:3500/v1.0/publish/shipping/neworder
GET http://localhost:3500/v1.0/secrets/keyvault/password
```

# Dapr Architecture

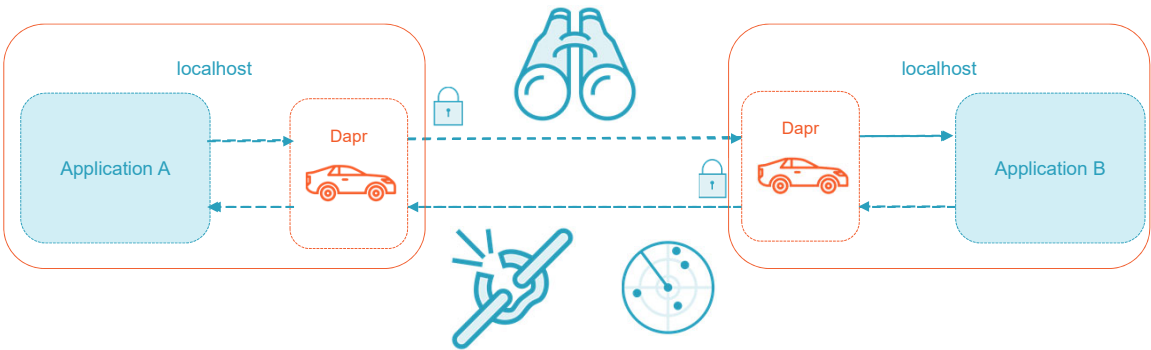

# The Dapr Sidecar

- Common industry architectural pattern
- Implements the APIs
- Uses building blocks to implement capabilities
- 1:1 mapping between application and sidecar

# The Dapr Sidecar

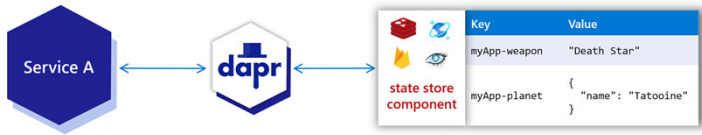

# Dapr Building Blocks

## State Management Building Block

- Setting the choices on concurrency control and data consistency.
- Performing bulk CRUD operations, including multiple transactional operations.
- Querying and filtering the key/value data.

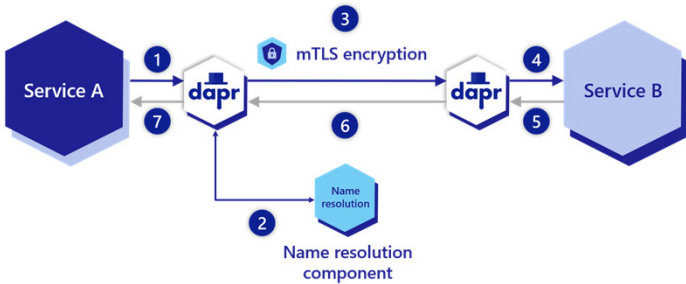

<https://docs.dapr.io/reference/components-reference/supported-state-stores/>

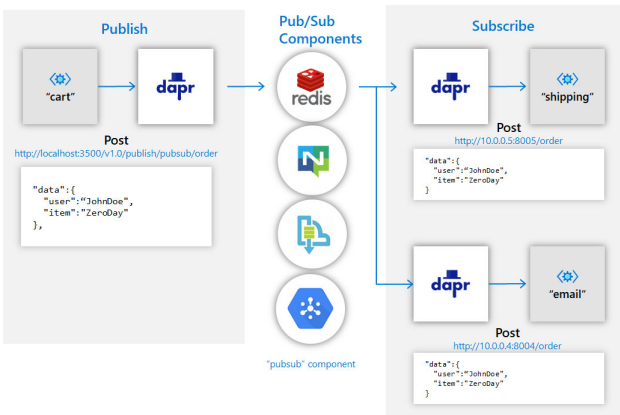

## Service Invocation Building Block

- Service discovery
- Secure communication
- Retries
- Tracing

## Publish Subscribe Building Block

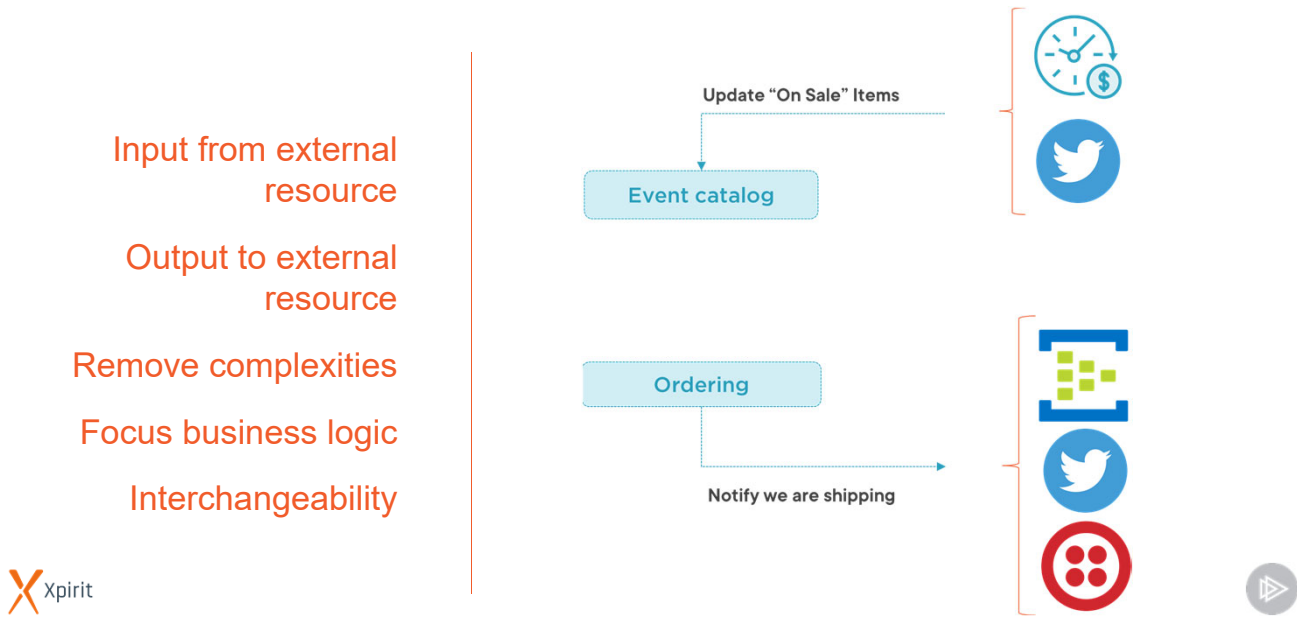

- Decoupling of services
- No vendor specific SDK's & No handling of the infrastructure
- Cloud Events Specification

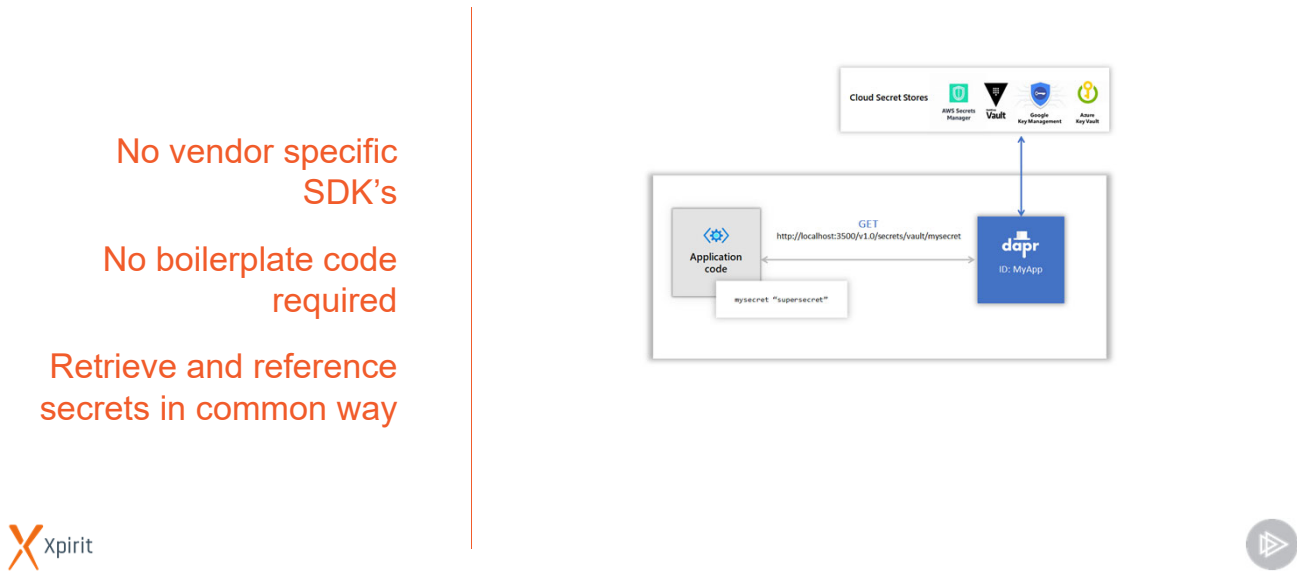

<https://docs.dapr.io/reference/components-reference/supported-pubsub/>

## Input / Output Bindings Building Block

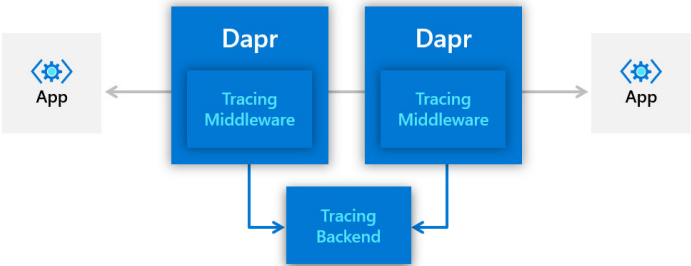

## Secret Management Building Block

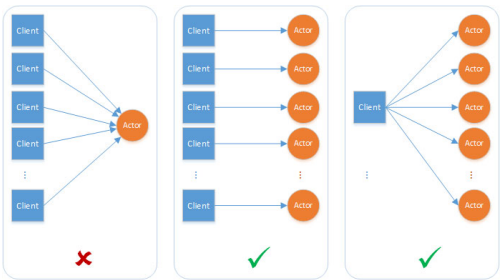

## Observability Building Block

- Full end to end tracing
- Automatic correlation
- Independent of implementation stack of microservice
- Zipkin & Open Telemetry

## Virtual Actors Building Block

- Virtual Actor Pattern
- Large number of small, independent and isolated units
- Single threaded

## What is Dapr middleware?

---

## Dapr Middleware

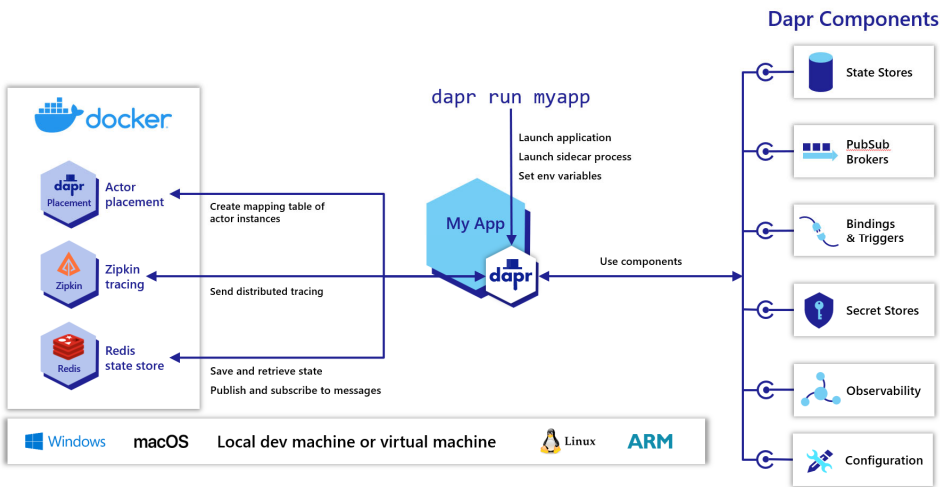

- W3C tracing
- OAuth2 authorization flow
- Bearer token verification
- Rate limiting

# Supported Hosting Models

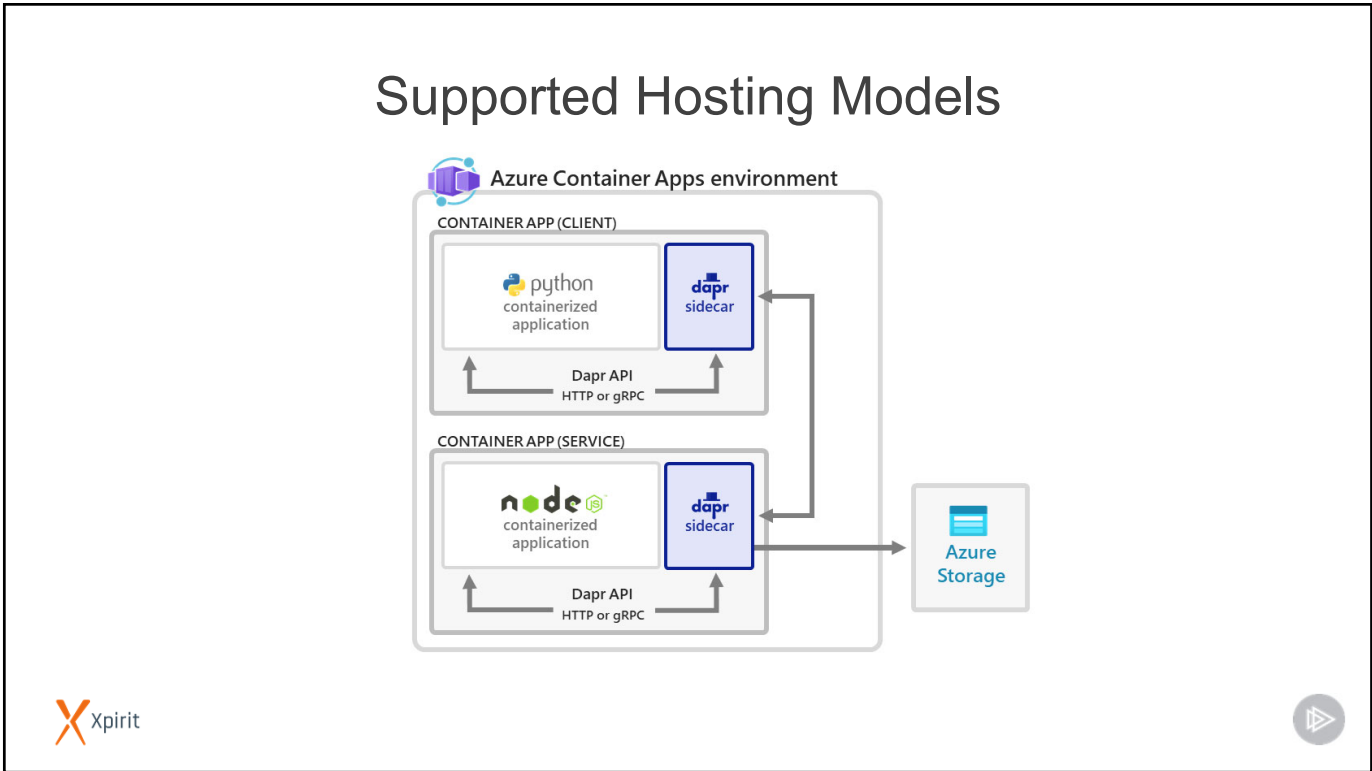

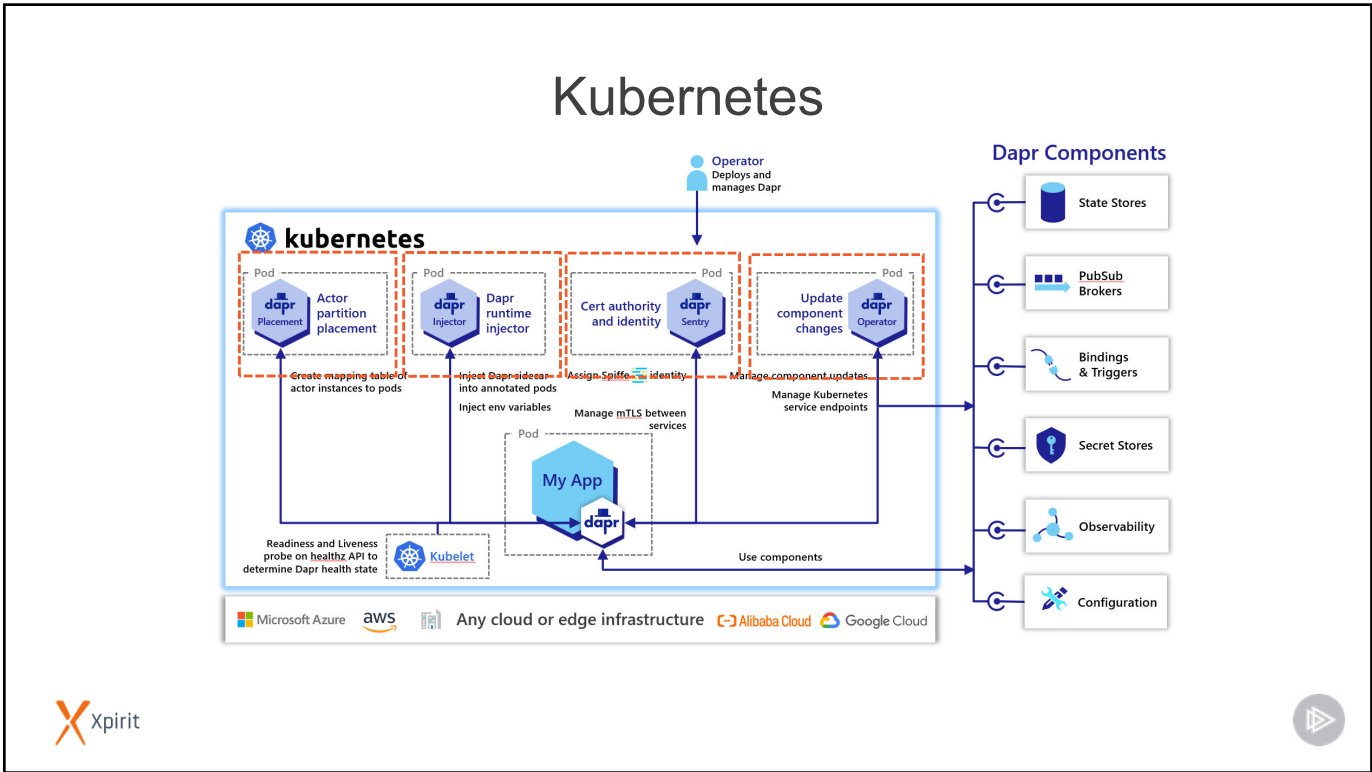

## Self Hosted Model

Self Hosted + Docker model

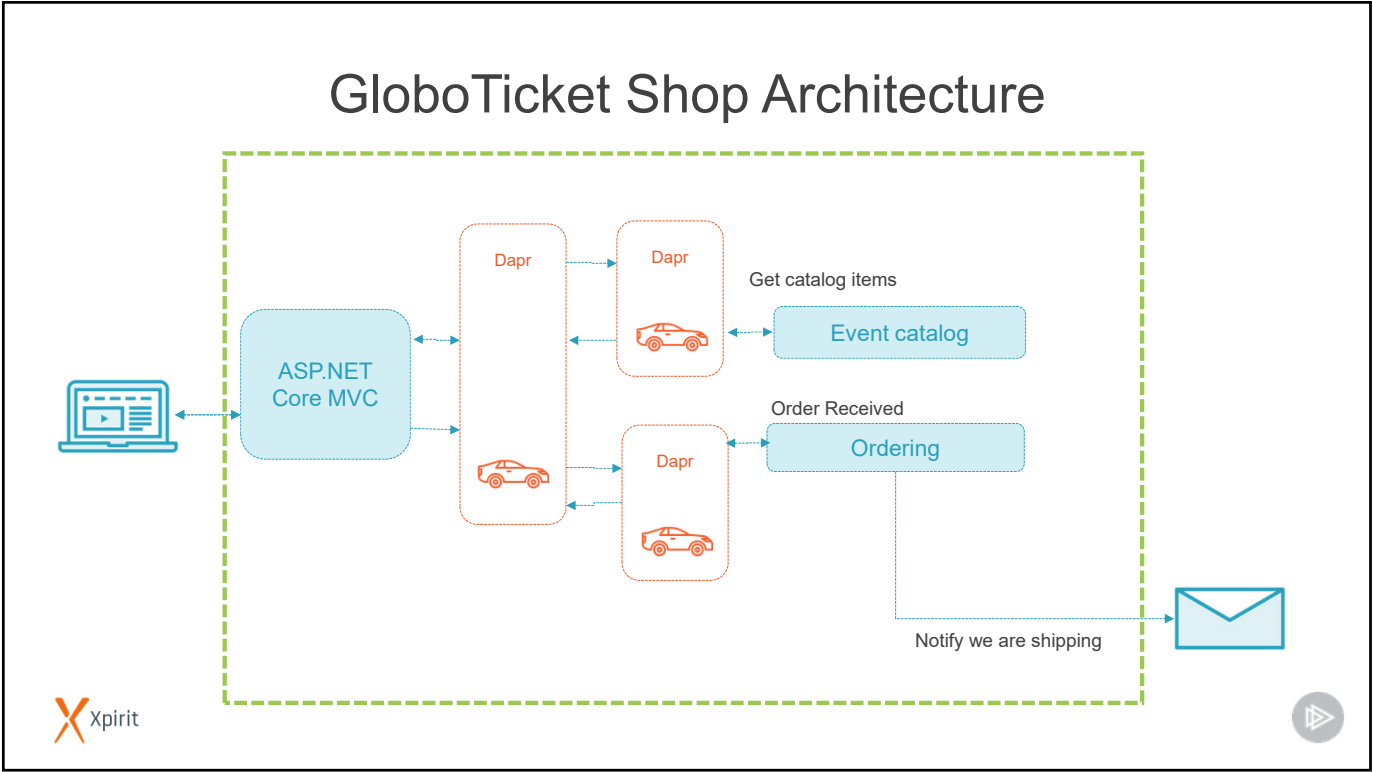

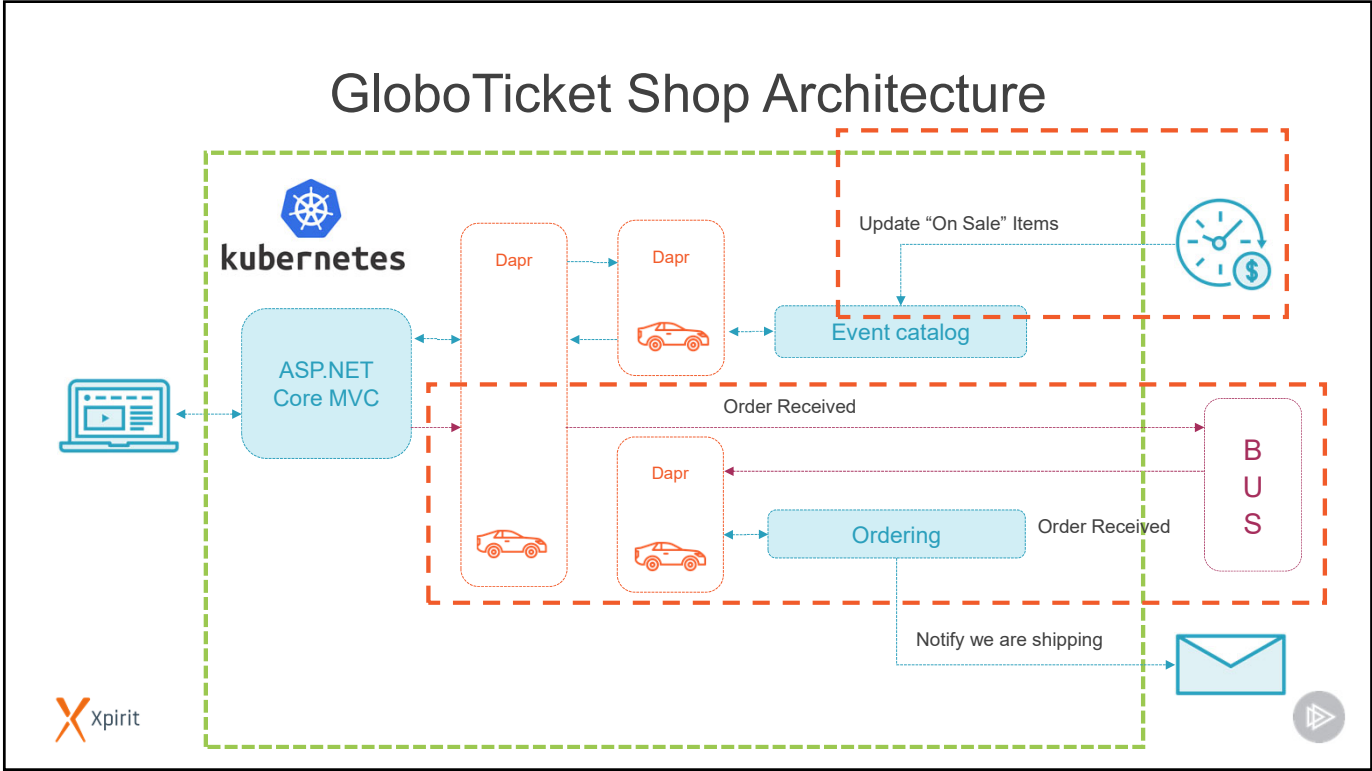

Demo

Hosting in Kubernetes

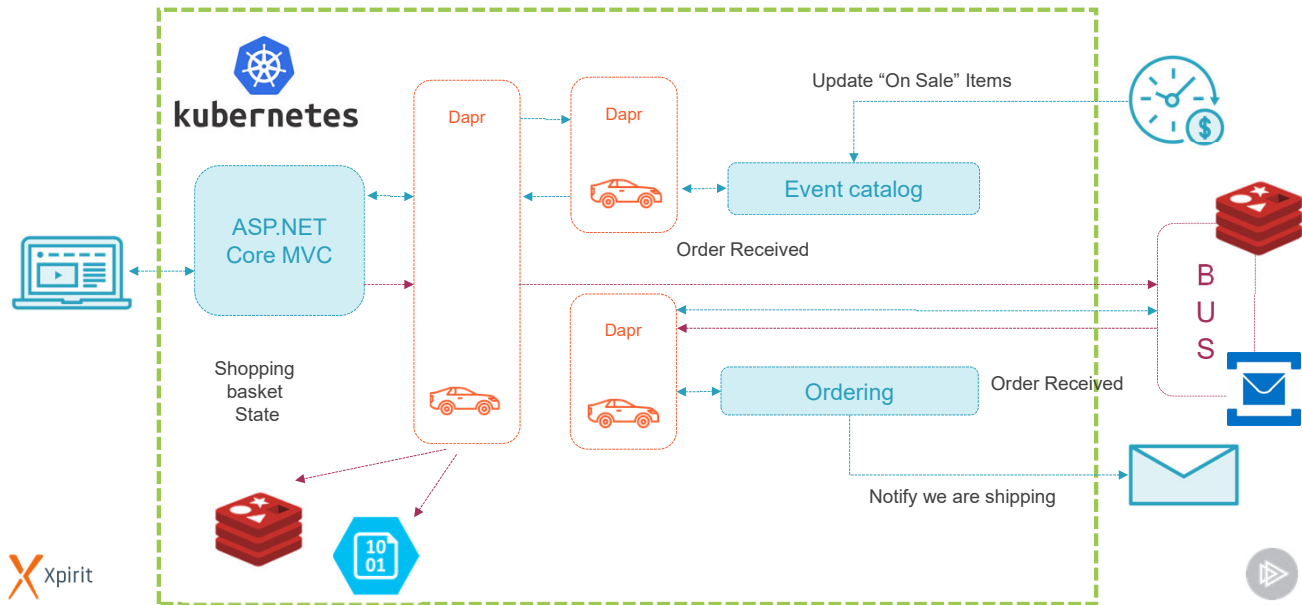

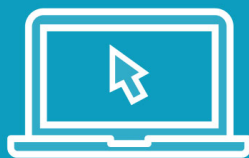

## Demo

### Changing component configurations
